Multicolor FISH in Human Cytogenetics (Cytogenetic & Genome Research)

Multicolor FISH in Human Cytogenetics (Cytogenetic & Genome Research)

Reprint of: Cytogenetic and Genome Research 2006, Vol. 114, No. 3-4 This special issue focuses on the recent developments in the exciting and continuously progressing field of human multicolor fluorescence in situ hybridisation (mFISH), highlighting the advantages, applications and possible limitations of this technique. Today, mFISH assays are indispensable for the precise characterization of complex chromosome rearrangements and numerical chromosome aberrations. In a first, more technically oriented part, the main mFISH-techniques (M-FISH, SKY, COBRA) are reviewed and their applications described. In the second part, world experts in the field discuss the multitude of presently available techniques and present their latest findings based on the use of mFISH in tumor cytogenetics, clinical genetics and basic investigations. The most recent studies employing mFISH in the diagnosis of leukemia, lymphoma and solid tumors are included as are preimplantation, pre- and postnatal clinical genetic studies using interphase-mFISH probe sets, FISH-banding and DNA-array techniques. Since structurally rearranged marker chromosomes have implications for hereditary and acquired diseases, chromosomal breakpoints are characterized and evaluated. This unique, comprehensive and up-to-date volume will be a valuable resource for (molecular) cytogeneticists, genetic counsellors, cell biologists, geneticists, reproductive scientists, obstetricians, pediatricians, oncologists and hematologists.

From reader reviews:

Jeffrey Lockwood:

The event that you get from Multicolor FISH in Human Cytogenetics (Cytogenetic & Genome Research) will be the more deep you searching the information that hide within the words the more you get serious about reading it. It doesn't mean that this book is hard to know but Multicolor FISH in Human Cytogenetics (Cytogenetic & Genome Research) giving you enjoyment feeling of reading. The copy writer conveys their point in certain way that can be understood by means of anyone who read the idea because the author of this book is well-known enough. This kind of book also makes your current vocabulary increase well. Making it easy to understand then can go with you, both in printed or e-book style are available. We highly recommend you for having this specific Multicolor FISH in Human Cytogenetics (Cytogenetic & Genome Research) instantly.

Donald Andrews:

The actual book Multicolor FISH in Human Cytogenetics (Cytogenetic & Genome Research) has a lot of information on it. So when you make sure to read this book you can get a lot of profit. The book was published by the very famous author. The writer makes some research before write this book. That book very easy to read you can find the point easily after scanning this book.

John Oliver:

Precisely why? Because this Multicolor FISH in Human Cytogenetics (Cytogenetic & Genome Research) is an unordinary book that the inside of the guide waiting for you to snap the item but latter it will surprise you with the secret that inside. Reading this book close to it was fantastic author who else write the book in such wonderful way makes the content within easier to understand, entertaining way but still convey the meaning completely. So , it is good for you for not hesitating having this any longer or you going to regret it. This excellent book will give you a lot of positive aspects than the other book get such as help improving your proficiency and your critical thinking means. So , still want to hold up having that book? If I have been you I will go to the reserve store hurriedly.

Jason Faria:

Reading a book for being new life style in this calendar year; every people loves to study a book. When you go through a book you can get a large amount of benefit. When you read books, you can improve your knowledge, due to the fact book has a lot of information in it. The information that you will get depend on what sorts of book that you have read. In order to get information about your study, you can read education books, but if you want to entertain yourself look for a fiction books, this sort of us novel, comics, in addition to soon. The Multicolor FISH in Human Cytogenetics (Cytogenetic & Genome Research) will give you a new experience in reading through a book.
