Nonparametric System Identification

Włodzimierz Greblicki, Mirosław Pawlak

Nonparametric System Identification Włodzimierz Greblicki, Mirosław Pawlak

Presenting a thorough overview of the theoretical foundations of non-parametric system identification for nonlinear block-oriented systems, this book shows that non-parametric regression can be successfully applied to system identification, and it highlights the achievements in doing so. With emphasis on Hammerstein, Wiener systems, and their multidimensional extensions, the authors show how to identify nonlinear subsystems and their characteristics when limited information exists. Algorithms using trigonometric, Legendre, Laguerre, and Hermite series are investigated, and the kernel algorithm, its semirecursive versions, and fully recursive modifications are covered. The theories of modern non-parametric regression, approximation, and orthogonal expansions, along with new approaches to system identification (including semiparametric identification), are provided. Detailed information about all tools used is provided in the appendices. This book is for researchers and practitioners in systems theory, signal processing, and communications and will appeal to researchers in fields like mechanics, economics, and biology, where experimental data are used to obtain models of systems.

From reader reviews:

Jane Nelsen:

Here thing why that Nonparametric System Identification are different and reputable to be yours. First of all studying a book is good nevertheless it depends in the content from it which is the content is as yummy as food or not. Nonparametric System Identification giving you information deeper since different ways, you can find any publication out there but there is no guide that similar with Nonparametric System Identification. It gives you thrill reading journey, its open up your eyes about the thing which happened in the world which is might be can be happened around you. You can bring everywhere like in park your car, café, or even in your approach home by train. When you are having difficulties in bringing the imprinted book maybe the form of Nonparametric System Identification in e-book can be your alternate.

Bernadine Williams:

Now a day people who Living in the era everywhere everything reachable by match the internet and the resources inside it can be true or not require people to be aware of each data they get. How individuals to be smart in receiving any information nowadays? Of course the correct answer is reading a book. Reading through a book can help men and women out of this uncertainty Information particularly this Nonparametric System Identification book as this book offers you rich details and knowledge. Of course the data in this book hundred per cent guarantees there is no doubt in it as you know.

Maria Ives:

Spent a free a chance to be fun activity to try and do! A lot of people spent their spare time with their family, or all their friends. Usually they performing activity like watching television, gonna beach, or picnic within the park. They actually doing same task every week. Do you feel it? Will you something different to fill your own personal free time/ holiday? May be reading a book can be option to fill your free of charge time/ holiday. The first thing that you ask may be what kinds of e-book that you should read. If you want to try out look for book, may be the guide untitled Nonparametric System Identification can be great book to read. May be it may be best activity to you.

Lisa Phelps:

That reserve can make you to feel relax. This specific book Nonparametric System Identification was multi-colored and of course has pictures on there. As we know that book Nonparametric System Identification has many kinds or type. Start from kids until adolescents. For example Naruto or Investigator Conan you can read and think that you are the character on there. Therefore , not at all of book are make you bored, any it makes you feel happy, fun and chill out. Try to choose the best book for you personally and try to like reading this.
