Modeling E-Commerce Systems- An Application of Generative Software Development Techniques
Sean Q. Lau
The pervasiveness and criticality of software applications in modern times have resulted in the demand for highly customized, high quality products in a timely and cost-efficient manner. Research in the area of Generative Software Development (GSD) aims to satisfy this demand. Model-Driven Software Product Lines (MDSPL) is a GSD approach to software development which allows developers to automatically build such products based on configuration knowledge and reusable assets. This book provides an introduction to the GSD approach and shows how it can be applied to model e-commerce systems; the intricate number of features and their interactions, as well as their applicability in the modern economy makes e-commerce systems the ideal domain for this study. The reader will gain a better understanding of the domain engineering process as we strive to define and build the reusable assets which can be used to create hundreds of variations of e-commerce systems. This book is intended for software researchers and practitioners who are interested in exploring and applying cutting-edge software engineering techniques, as well as readers who are interested in e-commerce systems in general.

From reader reviews:

Frances Small:

What do you in relation to book? It is not important together with you? Or just adding material when you need something to explain what yours problem? How about your time? Or are you busy man or woman? If you don't have spare time to complete others business, it is make one feel bored faster. And you have time? What did you do? Everyone has many questions above. They have to answer that question because just their can do in which. It said that about publication. Book is familiar in each person. Yes, it is right. Because start from on kindergarten until university need this specific Modeling E-Commerce Systems- An Application of Generative Software Development Techniques to read.

Christopher Gaul:

Spent a free time and energy to be fun activity to accomplish! A lot of people spent their down time with their family, or their very own friends. Usually they undertaking activity like watching television, planning to beach, or picnic inside park. They actually doing same task every week. Do you feel it? Will you something different to fill your own personal free time/ holiday? Could be reading a book could be option to fill your free time/ holiday. The first thing that you ask may be what kinds of reserve that you should read. If you want to try out look for book, may be the publication untitled Modeling E-Commerce Systems- An Application of Generative Software Development Techniques can be good book to read. May be it can be best activity to you.

Madeline Edwards:

The book Modeling E-Commerce Systems- An Application of Generative Software Development Techniques has a lot info on it. So when you read this book you can get a lot of gain. The book was compiled by the very famous author. Mcdougal makes some research previous to write this book. This book very easy to read you can get the point easily after perusing this book.

David Packard:

You could spend your free time to see this book this reserve. This Modeling E-Commerce Systems- An Application of Generative Software Development Techniques is simple bringing you can read it in the park, in the beach, train and also soon. If you did not have got much space to bring the actual printed book, you can buy the e-book. It is make you quicker to read it. You can save typically the book in your smart phone. Thus there are a lot of benefits that you will get when one buys this book.
