Difference sets are of central interest in finite geometry and design theory. One of the main techniques to investigate abelian difference sets is a discrete version of the classical Fourier transform (i.e., character theory) in connection with algebraic number theory. This approach is described using only basic knowledge of algebra and algebraic number theory. It contains not only most of our present knowledge about abelian difference sets, but also gives applications of character theory to projective planes with quasiregular collineation groups. Therefore, the book is of interest both to geometers and mathematicians working on difference sets. Moreover, the Fourier transform is important in more applied branches of discrete mathematics such as coding theory and shift register sequences.

From reader reviews:

John Moore:

Book is actually written, printed, or illustrated for everything. You can recognize everything you want by a publication. Book has a different type. As we know that book is important factor to bring us around the world. Next to that you can your reading ability was fluently. A book Finite Geometry and Character Theory (Lecture Notes in Mathematics) will make you to possibly be smarter. You can feel a lot more confidence if you can know about anything. But some of you think this open or reading any book make you bored. It is not make you fun. Why they are often thought like that? Have you trying to find best book or suitable book with you?

Joshua Molina:

Information is provisions for individuals to get better life, information nowadays can get by anyone in everywhere. The information can be a know-how or any news even restricted. What people must be consider while those information which is inside former life are challenging be find than now's taking seriously which one works to believe or which one the actual resource are convinced. If you find the unstable resource then you obtain it as your main information you will see huge disadvantage for you. All those possibilities will not happen within you if you take Finite Geometry and Character Theory (Lecture Notes in Mathematics) as your daily resource information.

Chris Walker:

The actual book Finite Geometry and Character Theory (Lecture Notes in Mathematics) has a lot of information on it. So when you read this book you can get a lot of gain. The book was published by the very famous author. Mcdougal makes some research just before write this book. That book very easy to read you can get the point easily after reading this book.

Kathleen Hernandez:

That e-book can make you to feel relax. This kind of book Finite Geometry and Character Theory (Lecture Notes in Mathematics) was bright colored and of course has pictures on there. As we know that book Finite Geometry and Character Theory (Lecture Notes in Mathematics) has many kinds or type. Start from kids until young adults. For example Naruto or Investigator Conan you can read and think that you are the character on there. Therefore not at all of book are make you bored, any it makes you feel happy, fun and relax. Try to choose the best book for yourself and try to like reading which.
