Adaptive Learning by Genetic Algorithms: Analytical Results and Applications to Economic Models

Herbert Dawid

The fact that I have the opportunity to present a second edition of this monograph is an indicator for the growing size of the community concerned with agent-based computational economics. The rapid developments in this field make it very difficult to keep a volume like this, which is partly devoted to surveying the literature, up to date. I have done my best to incorporate the relevant new developments in this revised edition but it is in the nature of such a work that the selection of material covered is biased by the authors personal interest and his informational constraints. My apologies go to all researchers in this field whose work is not or not adequately represented in this book. Besides the correction of some errors and typos several additions have been made. In the literature survey sections 2.4 (which was also reorganized) and 3.5 new material was added. I have also added a new section in chapter 3 which deals with the question how well empirically observed phenomena can be explained by GA simulations. A new section in chapter 6 presents a rather extensive analysis of the behavior of a two population GA in the framework of a sealed bid double auction market. Further minor additions and changes were made throughout the text.

From reader reviews:

Mary Olive:

This Adaptive Learning by Genetic Algorithms: Analytical Results and Applications to Economic Models tend to be reliable for you who want to certainly be a successful person, why. The explanation of this Adaptive Learning by Genetic Algorithms: Analytical Results and Applications to Economic Models can be one of several great books you must have is giving you more than just simple reading through food but feed you actually with information that probably will shock your prior knowledge. This book is handy, you can bring it almost everywhere and whenever your conditions in the e-book and printed kinds. Beside that this Adaptive Learning by Genetic Algorithms: Analytical Results and Applications to Economic Models forcing you to have an enormous of experience for instance rich vocabulary, giving you demo of critical thinking that we understand it useful in your day task. So , let's have it and luxuriate in reading.

Robert Ryan:

The particular book Adaptive Learning by Genetic Algorithms: Analytical Results and Applications to Economic Models has a lot associated with on it. So when you make sure to read this book you can get a lot of profit. The book was written by the very famous author. Mcdougal makes some research previous to write this book. This book very easy to read you can obtain the point easily after scanning this book.

Michael Carr:

Do you have something that that suits you such as book? The e-book lovers usually prefer to select book like comic, limited story and the biggest some may be novel. Now, why not hoping Adaptive Learning by Genetic Algorithms: Analytical Results and Applications to Economic Models that give your satisfaction preference will be satisfied by reading this book. Reading routine all over the world can be said as the opportunity for people to know world considerably better then how they react to the world. It can't be explained constantly that reading behavior only for the geeky man but for all of you who wants to become success person. So , for every you who want to start studying as your good habit, you could pick Adaptive Learning by Genetic Algorithms: Analytical Results and Applications to Economic Models become your starter.

Karina McDermott:

Is it anyone who having spare time then spend it whole day by means of watching television programs or just lying on the bed? Do you need something totally new? This Adaptive Learning by Genetic Algorithms: Analytical Results and Applications to Economic Models can be the answer, oh how comes? A book you know. You are therefore out of date, spending your extra time by reading in this brand-new era is common not a geek activity. So what these textbooks have than the others?
